

Installation & User Manual

Pre-Installation Requirements

- Ensure that **Git** is installed on your local computer prior to initiating installation.
- Git serves as the core engine for automatic background synchronization, version control, and cloud backups of your tests.

Windows Installation

- Download the Windows executable installer (`.exe`) from the official secure coordinator link.
- Right-click the executable and select '**Run as Administrator**' (click Yes on the system UAC prompt).
- Accept the License Agreement and click Next.
- Retain the default destination path: `C:\Program Files\AmpoCoder`
- Keep all additional tasks enabled (Desktop/Start Menu shortcuts, file associations) and click **Install**.
- Check the `***Launch AmpoCoder***` box and click **Finish**.

macOS Installation

- Download the certified disk image file (`.dmg`) from your system coordinator.
- Double-click the `.dmg` file to mount it, and drag the **AmpoCoder** icon into your **Applications** folder.
- **If blocked or unrecognized (Gatekeeper quarantine):**
 - Open Terminal and run:
`xattr -dr com.apple.quarantine /Applications/AmpoCoder.app`
 - Or go to **System Settings → Privacy & Security → Open Anyway**.
- Grant permissions for **Accessibility, Screen Recording, and Input Monitoring** when requested.
- Restart the application after granting system privileges.

Linux Installation

- If `.deb`: Use `sudo dpkg -i filename.deb`.
- To uninstall `sudo dpkg --purge amypocoder`.

Common Issues & Troubleshooting

- **Windows SmartScreen Warning:** Safe to bypass. Click '**More Info**' → '**Run Anyway**' to resume setup.

- **"Close Restricted Applications":** Ensure software like Skype, Discord, TeamViewer, or VM tools are closed before launching.
- **Internet Connection Error:** Verify network status. A stable connection is required to sync test modules.
- **Webcam/Mic Access:** Grant camera and microphone permissions when browser/app asks for exam proctoring.
